

# Setup for Henry

Hi Henry, here are three quick steps to get your automation stack ready. It takes about 15 minutes. When you finish, send me your n8n login and I'll take it from there.

## 1 Create your n8n Cloud account (Starter plan)

1. Go to **n8n.io** and click **Get started**. Sign up with your work email. The free trial doesn't need a card.
2. Pick a workspace name (for example *henry*). Your n8n address will be **henry.app.n8n.cloud**.
3. Open **Admin Panel** → **Manage Plan**, choose **Starter** and select **annual billing** to get the **€20/month** rate (2,500 workflow runs per month, unlimited steps). Add your card and confirm.

## 2 Get a Google Gemini API key and add it to n8n

1. Go to **aistudio.google.com/apikey** and sign in with your Google account.
2. Click **Create API key**, select or create a Google Cloud project, then **copy the key**.
3. In n8n, go to **Overview** → **Credentials** → **Create credential**, search for **Google Gemini (PaLM) API**, paste the key into **API Key** and leave the Host as **https://generativelanguage.googleapis.com**. Name it **Gemini** and click **Save**.

*Tip: if you want higher limits, turn on billing for that project in Google AI Studio.*

## 3 Get fal.ai API keys (Test + Production) and add them to n8n

1. Sign up at **fal.ai**, then open **fal.ai/dashboard/billing** and add a card or some credits.
2. Go to **fal.ai/dashboard/keys** → **Create Key**, choose the **API** scope and name it **Test**. Copy it right away, because fal only shows it once.
3. Do the same again for a second key named **Production**.
4. In n8n, open **Credentials** → **Create credential** → **Header Auth** and fill it in like this: Name Authorization, Value Key YOUR\_TEST\_KEY (the word Key, a space, then the key). Save it as **fal.ai - Test**.
5. Repeat with the production key and save it as **fal.ai - Production**.

*fal.ai doesn't have a separate test mode. The two keys work the same way, but keeping them separate lets us test safely and revoke one without breaking the other.*

### Final step: send me your n8n access

Send me your **n8n URL** (e.g. **henry.app.n8n.cloud**), **login email** and **password**. Please send them through a secure channel such as a password-manager share or a one-time secret link, not plain email. **Don't send the API keys themselves**. They're already saved in n8n, and n8n keeps them encrypted.
